Trend: The overall Close Rate hovered between **10.8%** in April, dropping to **6.4%** in May, bouncing to **10.4%** in June, and dropping to **4.4%** in September. The broader "Good Lead" rate (including EP pipeline) held steady around **13% to 16%**. However, September's low close rate is an operational artifact: **37 leads were still sitting in "EP Confirmed"** and had not had sufficient time to close at the time of data export. The apparent decline in Q3 is caused by sales lag, not deteriorating lead quality.

Debt tiers between **\$10k–\$30k** and **\$70k–\$90k** achieved 12% to 14 close rates.

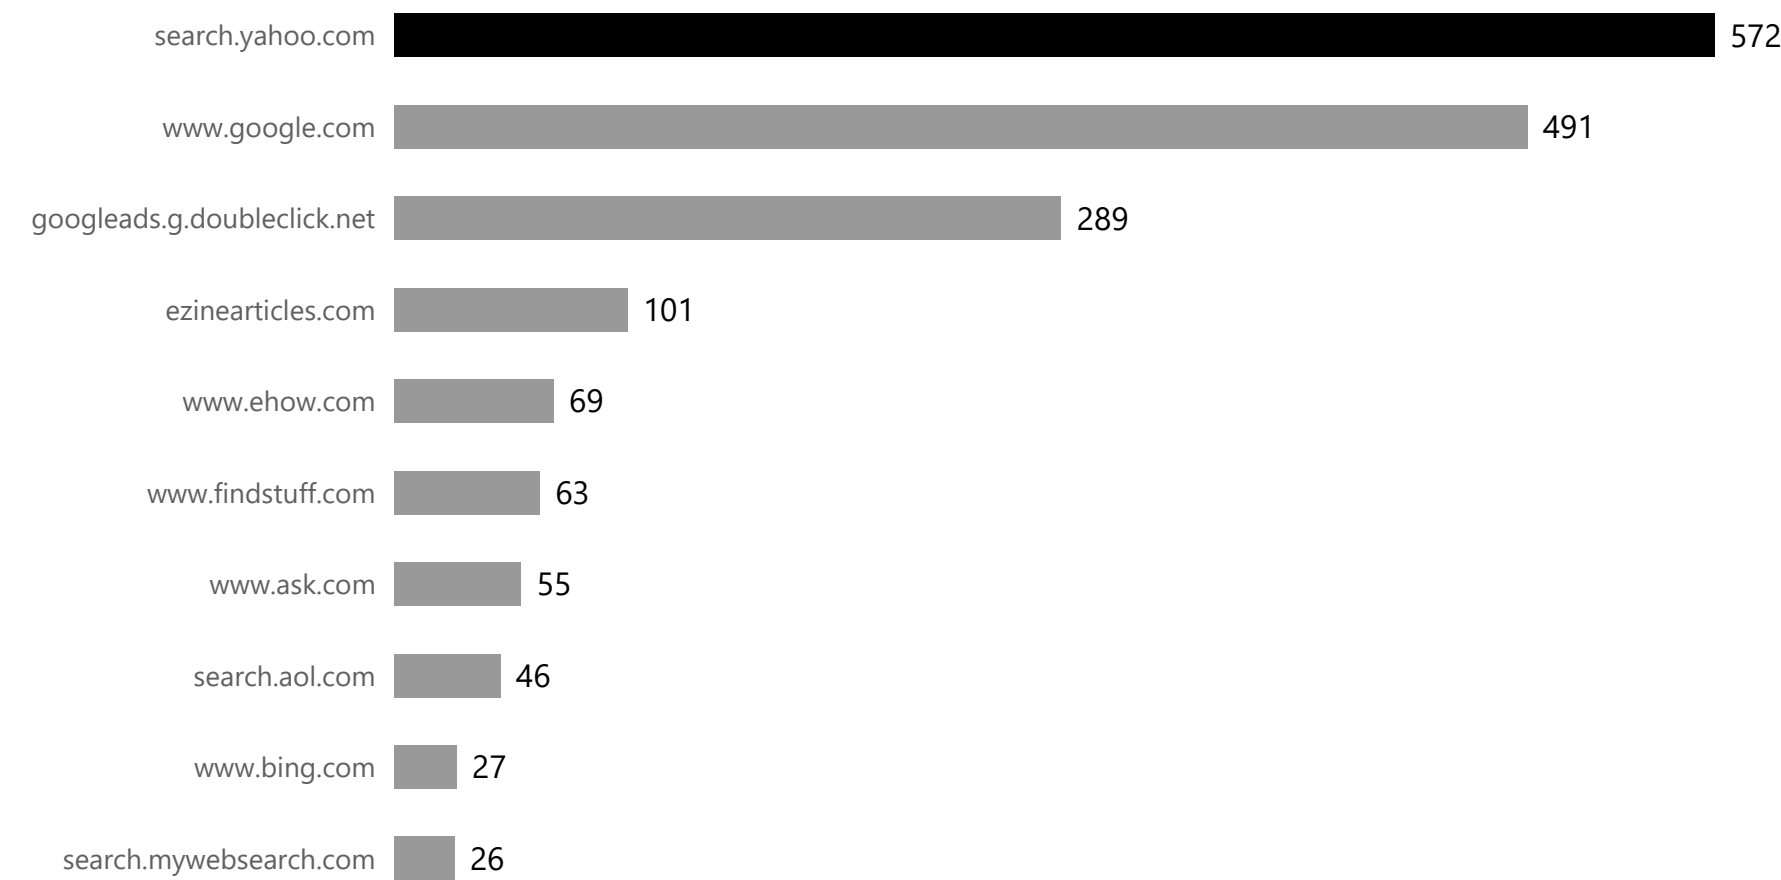

Credit Solutions branded variants delivered stronger conversion compared to generic forms (Debt Settlement1 Master), proving brand transparency prevents consumer drop-off when the sales team calls.

DebtReductionCallCenter closed at **9%** (16.2% Good Rate) compared to web form leads at **8.0%** (12.7% Good Rate). Human screening upfront eliminates fake contacts.

The 20% CPL vs 20% Quality Commercial Opportunity

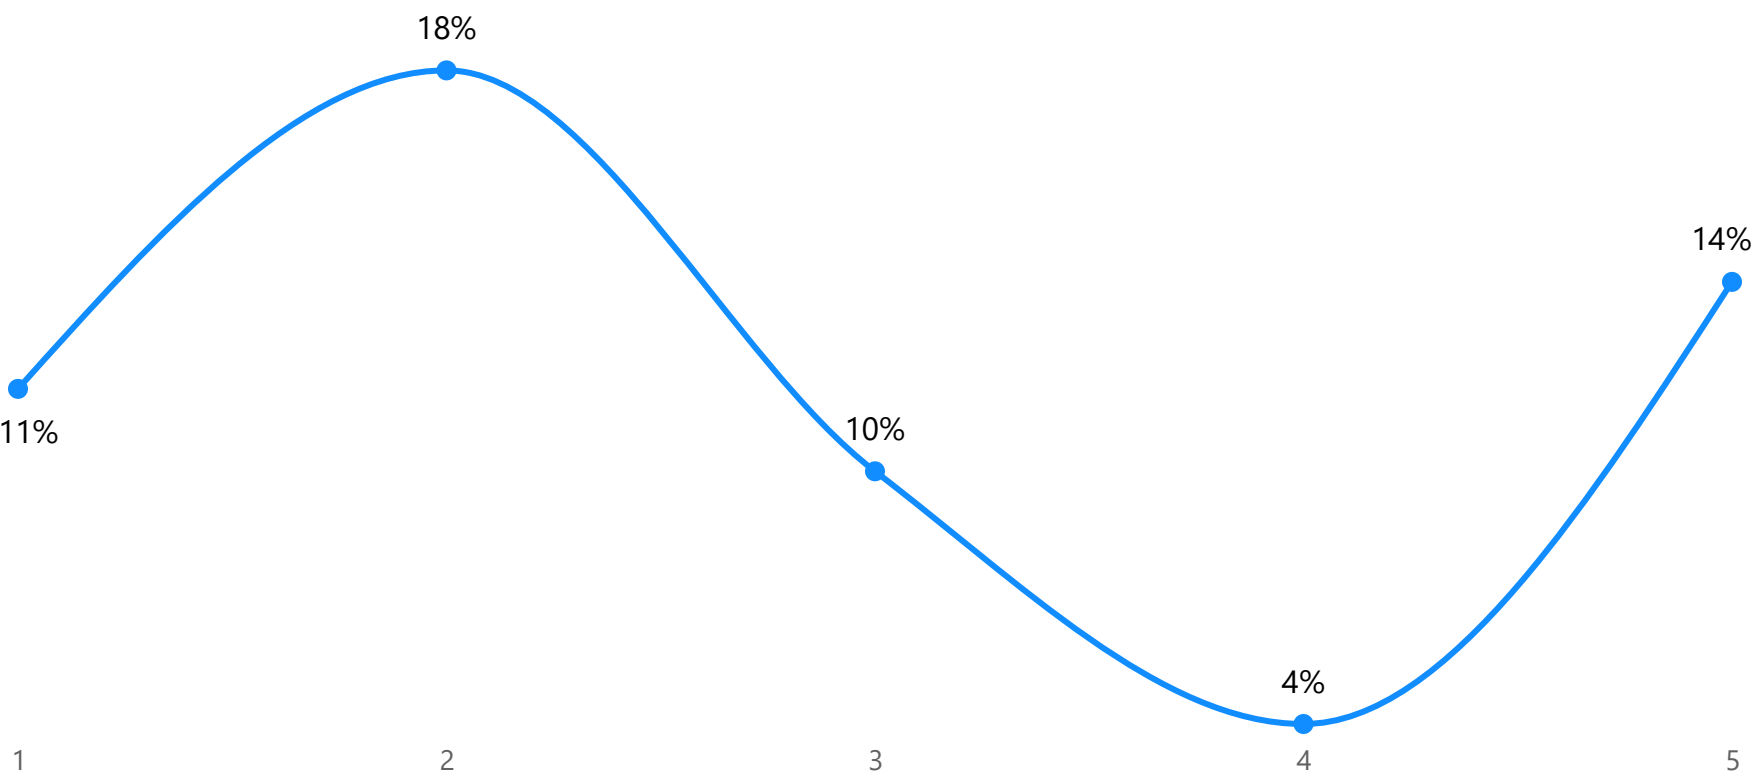

- **The Opportunity:** Moving from an 8.1% baseline Close Rate to **9.6%** (+20% quality) is achievable by eliminating low-tier traffic:
 - a. Real-time rejecting submissions with Phone Score <= 2.
 - b. Disqualifying leads with debt under **\$10,000**.
 - c. Pausing generic ad copy with low intent keywords.

Filtering out these segments eliminates approximately **20% to 25% of total lead volume**.
